

Good Stuff

We all love to ride our bikes, some of us look for many different ways to improve the performance in our rides. One thing is for certain, performance comes with a cost. Recently I was asked to try a performance product on one of our rides. This product happened to be a fuel additive. Now I know what you are thinking, another snake oil, *Right?*

Most people that know me also know that I have a very strong mechanical background. I've been in the automotive industry for over 30 years. Do my own work, get my hands dirty, take things apart that still work, etc. When I was asked to try this product out...I'll tell you I was skeptical to say the least. Being in the automotive industry, I am exposed to lots of different products claiming to do the one thing or another, some work but most do not.

So when I met the area rep. for this product, he gave me a little bottle and said add it to your fuel tank and fill it up. Sounds simple right? and so I did. What can possibly be so special about this little bottle?

What I'll say is this: Whatever was in this bottle actually worked! I was leery of this whole experiment but I could really feel a difference in the way my bike performed. Acceleration from a stop and more important, roll-on performance was notably improved.

What can I say? This stuff worked!! I'll be sure to use it again when I can get my hands on it.

Interested? Go to.... [www. Oxytane.com](http://www.Oxytane.com) and learn more about Oxytane and how you to can feel a difference in your ride. If you would like to read an article on this product Thunder Press did one in their October 2008-Motorhead Memo by Kip Woodring. Any other questions, you can contact the Arizona Rep. Jeff Tangen - jeffty@msn.com - 602-639-0645.

See you on the road....

Mark
